

ULP (Ultra-Low-Power) WIFI combo sensors (accelerometer, inclinometer and shock) with built-in data logger

## MAIN FEATURES

MOTT TOOLKIT FOR IOT

SENSOR

• Embedded data logger: up to 5 million data points (with events dating)

 Waterproof (IP67|NEMA 6) and Rugged aluminum casing,

• First wireless combo sensors on the market integrating accelerometer/inclinometer/shock

• High accuracy accelerometer (measurement range ±2g or ±10g) with FFT and DIN4150-3 (Ground Vibration) modules

 High accuracy bi-axis inclinometer ±15° or ±30°

• ULP (Ultra Low Power) Wifi technology

• Over the Air Firmware Upgrade via WIFI

 USB 2.0 link for device configuration (including firmware upgrade)

Store and Forward+: lossless data transmission

 IIOT Ready: integrates MOTT data exchange, an open-source Internet of Things (IOT) protocol

 Excellent radio link relying on the radio antenna diversity developed by Beanair®

 Scalable shock sensor ±2/4/8/16g with SSD (Smart Shock Detection) mode enabling trigger data acquisition on a shock detection

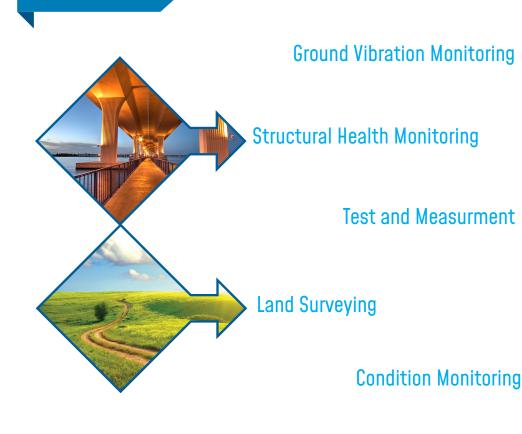

- Smart and flexible power supply: -Internal lithium-polymer rechargeable battery (780 mAh)
- -External 5VDC power supply compatible with both USB power and solar energy harvesting

#### AN OPEN-STANDARD & INDUSTRIAL WIFI TECHNOLOGY

- ULP (Ultra Low power) Wifi IEEE 802.11 b/g/n
- Lower total cost of ownership-works with existing access points
- Large installed base and consequent broad-based familiarity with configuration, use and troubleshooting at the physical and link layers
- Easy provisioning & IT friendly: our ULP wifi sensors use IP-over-Ethernet networking environment

#### A RELIABLE WIFI TECHNOLOGY THANKS TO OUR "STORE AND FORWARD+" FUNCTION

The store and forward technique works by storing the message transmitted by the BeanDevice® Wilow X-INC to a Wifi access point/ Wifi receiver. If the message is not received due to a network disruption, it will be retransmitted on the next transmission cycle. This technique allows to bring a lossless data transmission.

User can also enable the Hard real-time option; i.e. the message must be received by the Wifi Access Point/Wifi Receiver within the confines of a stringent deadline. It is automatically deleted if it failed to reach its destination within the allotted time span

## **MECHANICAL MOUNTING OPTIONS**

By default, the BeanDevice® Wilow® comes with a screw mounting lid.

Two other mounting options are available:

- Magnetic mounting , add the extension –M on your product reference
- 90° bracket, add the extension –BR on your product
